DETAILED ACTION***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Claim Objections

2. Claims 56-59 are objected to because of the following informalities:

Re claim 56: delete "indicia" at the end of the claim.

Re claim 57: delete "indicia" at the end of the claim.

15 Re claim 58: delete "indicia" at the end of the claim.

Re claim 59: delete "indicia" at the end of the claim.

Appropriate correction is strongly suggested. See claims 65-68 and 74-77.

Claim Rejections - 35 USC § 112

- 20 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 2876

4. Claim 64 recites the limitation "The digital image reading system of claim 63."

There is insufficient antecedent basis for this limitation in the claim. It should be "The bar code reading device of claim 63."

5. Claim 73 recites the limitation "The digital image reading system of claim 72."

5 There is insufficient antecedent basis for this limitation in the claim. It should be "The bar code reading device of claim 72."

Applicant is respectfully suggested to review the pending claims for correct dependencies, lack of antecedent basis, etc, since the pending claims appear to be allowable.

Allowable Subject Matter

6. Claims 6-11 and 48-55, 60-63, 65-72, 74-84 are allowed.

7. The following is a statement of reasons for the indication of allowable subject matter: the following is a method/algorithm for use by a digital image processor, and the
15 image processor utilizing such algorithm. The reader operates at a given frame rate, gain parameter and exposure time parameter; evaluate an image; determine whether the system operates at the fastest frame rate; if not, calculate a new exposure time parameter for desired illumination; and calculate a maximum frame rate for the exposure time; calculate a new exposure setting; and outputs the image if the image is acceptable and
20 repeats above-mentioned steps if not. Such algorithm is not disclosed or suggested by the cited references. The image reading apparatus comprising a plurality of digitizers operating on a parameter range digitizing on the particular parameter range is neither disclosed nor suggested by the cited references.
